**Soy Candles,
The Natural
Alternative to
Paraffin Wax
Candles**

These soy candles are made with 100% natural non-toxic wax derived from a special blend of soy beans and other botanical oils making these candles natural and clean burning. Not only are they non-toxic, but they also have the following advantages:

* They are safe to burn around small pets, including birds;

* They burn 30 to 50% longer than paraffin wax candles;

* They generate very little soot when burned (no more ugly black soot build-up around the top of the container or on the wall behind the candle);

* When burning the soy candle, the wax turns to a warm, scented oil perfect for soothing dry skin, therapeutic massages and for use as an after-shower body treatment.
